3) UBio Labs WCB195, Wireless Charging Stand with USB-C and A Output

Quantity: 256 (8 cases of 32)

Compatibility

Apple 8 and later. (See issues below with iPhone 12 compatibility)

Known Issues

There is a known issue with the iPhone 12 series of items due to their "MagSafe" feature. This affects the iPhone 12, iPhone 12 Mini, iPhone 12 Pro, and iPhone Pro Max.

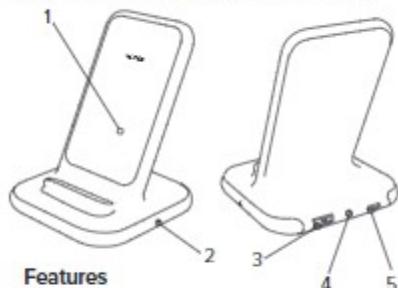

These devices contain a magnet that can cause issues with Qi-Certified wireless charging.

The MagSafe charging may result in the light on the unit blinking orange, which indicates Foreign Object Detection. The magnet and other metals may interfere with the wireless charging and generate heat, which can fry circuitry inside the phone or even potentially result in a fire. However, ubiolabs chargers are Qi-Certified, which means that your phone is protected from overheating. When the temperature reaches a certain limit, the charger no longer communicates with the phone's request to output more power.

Please note that this process can also be affected by certain iPhone cases, which interfere with the communication between the iPhone and the charging unit. If there is interference, the charging station may inadvertently continue supplying power because the phone cases blocks the command for the iPhone to terminate the request.
